

Title: LogSentinel-InnoViast

Subtitle: Human-In-The-Loop AI Log Triage Workspace

Footer / Tagline: Securing SOC Workflows with Privacy-First AI Log Analysis

INTRODUCTION :

LogSentinel-InnoViast provides a human-centered, AI-powered security triage dashboard. It sanitizes sensitive data client-side before sending logs to Google Gemini AI (`gemini-2.5-flash`), providing instant threat classification, IP extraction, and actionable mitigation steps—while retaining human review controls before SOC escalation.

The Problem

- **Header:** Modern SOC Operational Bottlenecks
- **Key Points:**
 - **Alert Fatigue:** SOC analysts are overwhelmed by high volumes of repetitive security logs, leading to delayed incident response.
 - **Data Privacy Risks:** Direct exposure of Sensitive Data (PII, IP addresses, internal credentials) when routing raw logs to public Cloud AI APIs.
 - **Accuracy Gaps:** Fully automated AI tools often generate false positives without human validation.
- **Visual Layout:** 2-column layout (Left: Alert Fatigue / Operational Speed, Right: Data Leakage & Security Risks).

The Solution & Architecture

- **Header:** Secure Human-In-The-Loop AI Workflow
- **Key Components:**
 - **Client-Side Sanitization:** Automatic redaction of sensitive telemetry, PII, and network identifiers directly in the browser/client.
 - **Gemini AI Analysis:** Anonymized log payloads sent to Gemini AI for rapid context extraction and threat classification.
 - **Human Confirmation Gatekeeping:** SOC analysts review, validate, or override AI outputs before final incident execution.
- **Visual Layout:** Horizontal 3-step flowchart diagram (Sanitize $\rightarrow$ AI Triage $\rightarrow$ Human Gatekeeper).

Key Features & UI Showcase

- **Header:** Platform Capabilities & Interface
- **Key Highlights:**
 - **Custom Sanitization Presets:** Configurable regex rules for instantly scrubbing IPs, tokens, and user credentials.
 - **Real-time Redaction Preview:** Side-by-side comparison of raw vs. sanitized log streams.
 - **Threat Severity Cards:** Color-coded severity metrics (Critical, High, Medium) with structured remediations.
- **Visual Layout:** Left side with feature bullet points; Right side reserved for interface UI screenshots.

Evaluation & Roadmap

- **Header:** Performance Metrics & Future Vision
- **Current Benchmarks:**
 - **15/15 Pass QA Matrix:** Successfully passed rigorous test cases covering sanitization edge cases.
 - **Zero Credential Leakage:** Verified 0% telemetry leakage to external AI endpoints during stress testing.
- **Future Roadmap:**
 - Native integration with major enterprise SIEM/SOAR platforms (Splunk, Microsoft Sentinel).
 - Automated playbook generation based on human-confirmed log insights.
- **Visual Layout:** Split slide with "QA Validation" metrics on the left and "Future Roadmap" milestones on the right.
